AQUA

HUMIAID is manufactured using the patented activation technology to produce highly purified sodium humate with 60% humic acid content.

HUMIAID is an organic compound called humic acid in sodium salt. It is formed through coalification of the plant material under high pressure and high temperature with series of condensation and oxidation. Humiaid has 60% sodium humate.

MECHANISM OF ACTION

- ✓ The decrease of the coefficients of apparent digestibility in Nitrogen substances leads to decreased amounts of ammonia into the environment
- ✓ Increases anti-body titer against NCD in chickens
- ✓ Anti-oxidant, anti-inflammatory and anti-diarrheal
- ✓ Natural electrolyte
- ✓ Promotes nutrient absorption and utilization
- ✓ Anti-viral, antibacterial and anti microbial
- ✓ Stimulant and has strengthening effect on the humoral and cellular immune system

MAIN BENEFITS OF HUMIAID IN ANIMALS

- ✓ Improve feed efficiency and weight gain of broiler chickens
- ✓ Increase egg production and egg shell quality
- ✓ Improve Haugh unit values and egg yolk colour
- ✓ Significant increase in serum immunoglobulin
- ✓ Enhance egg albumin and intensified immunity in laying hens
- ✓ Increment BW, ADG and ADFI
- ✓ Increase in Magnesium and boost stress response

BEIJING SLOAN BIOLOGICAL
TECHNOLOGY CO.,LTD
Add : Room211, Unit 2, No.3 Building,
Zhujiang Moore International Center, No.
1Beiqing Road , Changping Dirstrect , Beijing,
China
Website : <http://en.sloan-tech.com>

Packaging: 25kg per bag
Shelf Life: 24 Months

USAGE

Swine:	1.5 - 3 kg/ MT of Feeds
Poultry:	1 - 2 kg/ MT of Feeds
Aqua:	2 - 4 kg/MT of Feeds
Ruminants:	2 - 3 kg/MT of Feeds
Pets:	2 - 3 kg/MT of Feeds
